Dejel Cyrus De Asis

Negros Occidental, Philippines | deasisdejel08@gmail.com | Dejel-Cyrus-De-Asis | dejely

Summary

Computer Science student at the University of the Philippines building full-stack, AI-assisted, and real-time software systems focused on operational workflows, monitoring platforms, and automation.

contributed to improving digital safety in UPV by responsibly auditing exposed web systems, documenting security risks, and reporting findings to help protect student data and other platforms.

Built open source projects involving computer vision, cybersecurity, blockchain systems, dashboards, and mobile-to-cloud communication pipelines.

Hackathon champion and Hack4Gov awardee with hands-on experience in Linux-based development, API integration, cybersecurity labs, and systems-oriented software engineering.

Achievements

AI SUMMIT Reed Elsevier PH Hackathon 2026 Jan 2026

- 1st runner-up with team Popcorn Prophets in the Reed Elsevier Philippines AI Summit hackathon.
- Led DevOps and deployment, shipping the project to production within a 4-hour development window.

Quantum and Cybersecurity CTF Hackathon 2026 Jan 2026

- Solved quantum problems that involved investigating qubit behavior.
- Solved cryptography questions that involved quantum mechanics.

Manobela Hackathon Jan 2025

- Champion for developing Manobela, a real-time driver monitoring system focused on drowsiness and distraction detection using computer-vision signals.
- Designed and implemented a mobile-to-cloud monitoring pipeline using lightweight telemetry transmission and cloud-assisted processing.

Hack4Gov Jan 2025

- 1st runner-up and top-performing participant in Hack4Gov 2025 cybersecurity competition.
- Competed in cybersecurity challenges involving network analysis, digital forensics, cryptography, web exploitation, and Linux-based investigation workflows.

Projects

Manobela

- Developed a real-time driver monitoring pipeline processing facial landmark telemetry at approximately 15 FPS using computer-vision signals.
- Built lightweight mobile-to-cloud communication workflows to reduce bandwidth usage and device-side processing overhead.
- Integrated Microsoft Azure cloud-assisted computation for scalable real-time monitoring and analytics.
- Implemented drowsiness and distraction detection using facial landmark analysis and real-time feedback systems.

HERMES

- Built a Hazard and Emergency Reporting, Monitoring, and Evaluation System for real-time disaster communication workflows.
- Designed structured reporting pipelines capable of organizing incoming chat-based emergency reports into centralized monitoring dashboards.
- Implemented low-connectivity communication support using Meta Messenger integration for areas with limited telco infrastructure.

Scan a Delegate

- Developed a blockchain-based voting platform focused on transparency and tamper-resistant vote tracking.
- Implemented Solidity smart contracts and deployed testing workflows on the Ethereum Sepolia test network.
- Explored decentralized identity verification and transparent election record management concepts.

Education

BS **University of the Philippines**, Computer Science — Miagao, Iloilo — Aug 2024 – present

SHS **Dr. Vicente F. Gustilo Memorial National High School**, Science, Technology, Engineering, and Mathematics — Cadiz, Negros Occidental — Dec 2022 – June 2024

- Conducted research on a semi-autonomous multi-sensory waste segregation robot capable of classifying hazardous, recyclable, biodegradable, and non-biodegradable waste.

Skills

Languages: Python, TypeScript, JavaScript, Java, C/C++, SQL, Solidity

Frontend: React, Expo, HTML, CSS

Backend & Databases: Node.js, PostgreSQL, Supabase, Firebase, REST APIs

Cloud & DevOps: AWS, Microsoft Azure, Docker, GitHub Actions

Cybersecurity: Wireshark, Burp Suite, Nmap, Gobuster, Kali Linux, Autopsy, John the Ripper

Tools: Git, GitHub, Linux, VS Code, API Testing

Certificates

NAISC Certificate

Singapore (Online) — Jan 2025

- Completed training related to AI, LLMs, and AWS-based implementation.

Introduction to Cloud 101

- Completed foundational training in AWS Cloud infrastructure, cloud services, and cloud computing concepts.

Introduction to AWS Security

- Completed foundational training in AWS cloud security, including IAM and SIEM concepts.

ISC2 Candidate

- Pursuing a cybersecurity Certificate to a COMPTIA Security+ transition certification

Software Architecture & System Design Foundations

- Completed training in software architecture and system design foundations.

Experience

Independent Software Developer — Jan 2018 – present (8 years 10 months)

- Built web, mobile, and systems-oriented projects using React, TypeScript, JavaScript, Python, Java, C/C++, Expo, Supabase, PostgreSQL, Firebase, and cloud platforms.
- Designed projects involving computer vision, blockchain voting, budgeting tools, AI/LLM implementation, cybersecurity, automation, dashboards, and full-stack development.
- Worked with Git, GitHub, Linux environments, API integration, database design, debugging, and technical documentation.

CTF Player and Cybersecurity Learner — Jan 2024 – present (2 years 10 months)

- Participated in cybersecurity competitions and hands-on labs involving network analysis, digital forensics, cryptography, web exploitation, and Linux-based security workflows.
- Conducted authorized reconnaissance and responsible security assessment activities under the guidance/permission, documenting exposed risks and reporting findings through proper channels to help improve the security of web systems.
- Developed practical understanding of vulnerability discovery, responsible testing, and defensive security concepts.

National AI Student Challenge 2025 - AWS Regional LLM League

- Implemented and deployed LLM-supported workflows using AWS-based tools and cloud infrastructure.
- Built foundational knowledge in AI systems, prompt-based applications, and cloud-supported LLM workflows.
