Dejel Cyrus De Asis

Negros Occidental, Philippines | deasisdejel08@gmail.com | Dejel-Cyrus-De-Asis | dejely

Summary

Computer Science student at the University of the Philippines building full-stack, AI-assisted systems that turn operational workflows into automated, dashboard-driven platforms.

Built HERMES, a Supabase-backed reporting and monitoring platform that ingests chat-based reports through the Meta Messenger API and routes them into centralized role-based dashboards.

Experienced with API integrations, LLM workflows on AWS, real-time data pipelines, and cloud deployment; led DevOps and production shipping for a hackathon AI product within a 4-hour window.

Hackathon champion and runner-up who works independently or in teams, documents systems clearly, and designs for process consistency and scalability.

Achievements

AI SUMMIT Reed Elsevier PH Hackathon 2026 October 2026

- 1st runner-up with team Popcorn Prophets in the Reed Elsevier Philippines AI Summit hackathon.
- Led DevOps and deployment, shipping an AI-powered product to production within a 4-hour development window.

Quantum and Cybersecurity CTF Hackathon 2026 July 2026

- Champion of the quantum-themed cybersecurity CTF.
- Solved quantum problems that involved investigating qubit behavior.
- Solved cryptography questions that involved quantum mechanics.

TrackTech CSS Hackathon Jan 2025

- Champion for building Manobela, a real-time driver monitoring system focused on drowsiness and distraction detection using computer-vision signals.
- Designed and implemented a mobile-to-cloud monitoring pipeline using lightweight telemetry transmission and cloud-assisted processing.

Hack4Gov Jan 2025

- 1st runner-up and top-performing participant in Hack4Gov 2025 cybersecurity competition.
- Competed in cybersecurity challenges involving network analysis, digital forensics, cryptography, web exploitation, and Linux-based investigation workflows.

Projects

HERMES

- Built an internal-style operations platform with centralized dashboards for real-time incident intake, monitoring, and evaluation.
- Automated the intake workflow by converting unstructured Messenger chat reports into structured records via API integration, reducing manual triage.
- Designed the Supabase/PostgreSQL data model and role-based access for coordinators and responders, with status tracking across the report lifecycle.
- Enabled low-connectivity communication through Meta Messenger for areas with limited telco infrastructure.

SACKTO IRPC

- Built an operations platform for the Iloilo Rice Processing Complex covering online booking of drying and milling, palay selling with quotes, and rice purchasing with live pricing.
- Added an SMS command interface (book, check status, get prices and quotes, cancel) so farmers without mobile data can use the same workflows.
- Provided staff sign-in for internal operations, supporting scheduling and customer transactions in one system.

Manobela

- Architected a mobile-to-cloud pipeline processing facial landmark telemetry at ~15 FPS, with lightweight transmission to cut bandwidth and device load.
- Built FastAPI services and Azure-backed processing for real-time drowsiness and distraction detection with live feedback and session insights dashboards.
- Champion project of the TrackTech CSS Hackathon.

Scan a Delegate

- Developed a blockchain-based voting platform with tamper-resistant vote tracking and transparent record management.
- Implemented Solidity smart contracts and test workflows on the Ethereum Sepolia network.

Education

BS **University of the Philippines**, Computer Science — Miagao, Iloilo — Aug 2024 – present

SHS **Dr. Vicente F. Gustilo Memorial National High School**, Science, Technology, Engineering, and Mathematics — Cadiz, Negros Occidental — Dec 2022 – June 2024

- Conducted research on a semi-autonomous multi-sensory waste segregation robot capable of classifying hazardous, recyclable, biodegradable, and non-biodegradable waste.

Skills

AI & Automation: LLM workflows (AWS), prompt-based applications, API-driven automation, GitHub Actions, Messenger API bots

Backend, APIs & Data: Supabase, PostgreSQL, Firebase, Node.js, FastAPI, REST APIs, webhooks, database design

Frontend & Dashboards: React, TypeScript, Expo / React Native, HTML, CSS

Cloud & DevOps: AWS, Microsoft Azure, Docker, Vercel, CI/CD

Languages: Python, TypeScript, JavaScript, Java, C/C++, SQL, Solidity

Tools: Git, GitHub, Linux, API Testing, technical documentation

Certificates

NAISC Certificate

Singapore (Online) — Jan 2025

- Completed training related to AI, LLMs, and AWS-based implementation.

Introduction to Cloud 101

- Completed foundational training in AWS Cloud infrastructure, cloud services, and cloud computing concepts.

Introduction to AWS Security

- Completed foundational training in AWS cloud security, including IAM and SIEM concepts.

ISC2 Candidate

- Pursuing a cybersecurity Certificate to a COMPTIA Security+ transition certification

Software Architecture & System Design Foundations

- Completed training in software architecture and system design foundations.

Experience

Independent Software Developer — Jan 2018 – present (8 years 10 months)

- Built internal-style web and mobile tools (dashboards, budgeting, reporting, monitoring) with React, TypeScript, Python, Expo, Supabase, PostgreSQL, and Firebase.
- Integrated third-party APIs and cloud services, designed relational schemas, and automated repetitive workflows end to end.
- Wrote clear technical documentation and structured processes so projects could be handed off and extended.

National AI Student Challenge 2025 - AWS Regional LLM League

- Implemented and deployed LLM-supported workflows using AWS-based tools and cloud infrastructure.
- Built foundational knowledge in AI systems, prompt-based applications, and cloud-supported LLM workflows.

CTF Player and Cybersecurity Learner — Jan 2024 – present (2 years 10 months)

- Competed in cybersecurity competitions covering network analysis, forensics, cryptography, and web exploitation.
- Conducted authorized security assessments of web systems, documenting risks and reporting through proper channels; this security-minded approach carries into safe API and data handling.
